Deloitte.

Vibe Coding: The L&D Superpower You Didn't Know You Had

Mission 1 instructions

The brief

The Code of Heroic Conduct has been renamed Code of Operational Responsibility recently and the link to the document has changed. The quickest way to distribute the document to agents would be with a QR code.

Your mission: Build a QR code generator and a QR code for the Code of Operational Responsibility document

The steps

1. Open your favorite AI chatbot and paste the prompt below
2. Describe what you want to build:
   - **A QR code generator to convert a URL into a QR code**
3. Save the code as an HTML file on your computer
4. Open and test with the link to the AEGIS code of responsibility

https://annecoudrette.github.io/aegis-catalog/resources/code-of-operational-responsibility.pdf

The prompt

Note: This is a prompt to help support you during your first mission, but it is not necessary to be successful.

You are a vibe coding coach helping me build a project from scratch. I'm a learning professional. I know nothing about coding — treat HTML, CSS, and JavaScript as totally new concepts for me.

Rules for how you work with me:

- Keep every response short. A few sentences of explanation, then the code. I'm in a live session and don't have time to read paragraphs.
- For edits and fixes, provide me with the full code for the project, I don't have time to manually edit parts of the code.
- Always produce a single HTML file I can save and open in my browser. Everything (styling, logic, content) goes in one file.
- Build one feature at a time. Show me a working version, then ask what I want to add or change next.
- When I need to make a design decision, give me 2-3 options, briefly explain how each one changes the result, and let me pick.
- When you give me code, tell me in one sentence what it does in plain English.
- If I paste an error message, explain what went wrong like I'm five and give me the fix.

Start by asking: "What do you want to build today?"

Mission 2 instructions

The brief

When a new recruit is deployed for the first time, they face situations where the right call isn't obvious. This field protocol simulator gives recruits a safe space to practice those calls before the stakes are real. They get a scenario; they choose how to respond.

Your mission: Create an actual chat interaction for the learner to practice the simulated scenario.

The steps

1. Open a new chat in your favorite AI assistant
2. Describe what you want to build:
    - **a single HTML file with realistic chat interface for a training simulation**
3. **Include your scenario content** (copy paste from below)
4. **Save** the result as an HTML file

The chat scenario

HQ Dispatch:

"Recruit, field protocol sim. You're near the Meridian Street bridge. A civilian is refusing to evacuate — says his cat is in his third-floor apartment. Building is structurally compromised. What's your move?"

Round 1:

- **A:** "I'll secure the area and radio for civilian support."
- **B:** "I can see the balcony from here. I'll fly up and grab the cat."

Dispatch after A:

"Civilian support is 20 minutes out. He's getting louder and a crowd is forming. Someone's filming. How do you handle the wait?"

- **A-1:** "Hold the perimeter. They can film all they want, the bridge is my mission."
- **A-2:** "Talk to him directly. Acknowledge the cat, explain the timeline, ask him to help me keep the crowd calm."

Dispatch after B:

"Cat secured — angry but alive. Minor suit damage. Now three other people want you to grab things from their apartments. What do you say?"

- **B-1:** "One rescue was a judgment call. I'm not a moving service. Direct them to civilian support."
- **B-2:** "Quick wins only — anything I can see from a balcony, two minutes max, then I'm back on the bridge."

Debrief responses:

- **A-1:** "Textbook. Crowd wasn't happy but the bridge got assessed on time. Protocol: 5/5. Public trust: 2/5. Note: efficiency without empathy has a shelf life."
- **A-2:** "Smart de-escalation. He actually helped you clear bystanders from the bridge approach. Protocol: 4/5. Public trust: 5/5. Note: sometimes the detour is the shortcut."
- **B-1:** "Good boundary. You showed initiative on the cat and discipline on the rest. Protocol: 3/5. Public trust: 3/5. Note: consistency matters — they'll remember you helped one person but not them."

B-2: "Grabbed one more cat and someone's medication. Lost four minutes but the crowd dispersed happy. Protocol: 2/5. Public trust: 5/5. Note: heroism without limits burns you out. Watch scope creep."

Vibe Coding: The L&D Superpower You Didn't Know You Had

Take it further: Day 2 missions

Pick one idea below. Tell your chatbot what you want in plain language — you don't need to know how it works, just what you want to see.

Quick wins 5-30 min each	**Intermediate** 1-2 hours each	**Advanced** Half-day projects
Multiple interactions with a score tracker Right now your chat plays through once. Add a running score that changes based on what the learner selects, and show the final score at the end. **Prompt to try:** *Add a score that goes up or down depending on which answer the learner picks. Show the final score at the end of the conversation.*	**Free text answer box with keyword detection** Instead of clicking a button, the learner types their own response, and the chat reacts based on key words it detects. **Prompt to get started:** *Instead of multiple choice buttons, let the learner type their answer in a text box. If their answer contains certain words, respond differently*	**E-learning integration** (input: scenario detection, output: score) Embed your chat activity into a real course — pass information in about which scenario to load, and pass a score back out when it's done. **Prompt to get started:** *I want this to run inside an existing e-learning course. Can you show me how to send the final score out to the course player when the conversation ends?* **Heads up:** this one usually needs a digitizer to finish the connection with the e-learning tool.
Countdown clock for each decision Add pressure and realism by giving the learner a set number of seconds to decide before the scenario moves on automatically. **Prompt to try:** *Add a 15-second countdown timer to each question. If time runs out, pick a default answer and continue.*	**Multiple scenarios** Give the learner a menu at the start to choose between two or three different situations, each with its own path. **Prompt to get started:** *Add a start screen where the learner picks between three different scenarios before the conversation begins.*	**SCORM wrapper for LMS reporting** Package your chat activity as a SCORM file so it can be uploaded to a learning management system and tracked like a normal course. **Prompt to get started:** *Can you help me understand what SCORM packaging would involve for this activity, and what a first version might look like?* **Heads up:** this is the most technical idea on this list. Expect some trial and error, and don't be surprised if you need extra help to get it fully working.
Replay button to try again Let the learner reset the conversation and try different choices without reloading the page. **Prompt to try:** *Add a button at the end that lets me restart the*	**Print a debrief report** At the end of the conversation, generate a one-page summary of the choices made and the outcome, so a learner (or their manager) can review it later. **Prompt to get started:**

Quick wins 5-30 min each	Intermediate 1-2 hours each	Advanced Half-day projects
conversation from the beginning.	*At the end, create a printable summary of all the choices the learner made and the final result.*	
Avatar + typing animation Make it feel more like a real chat app by adding a profile picture for each character and a "typing..." animation before messages appear. **Prompt to try:** *Add a small circular profile picture next to each message, and show a typing animation for a few seconds before each reply appears.*		

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited (DTTL), its global network of member firms, and their related entities (collectively, the “Deloitte organization”). DTTL (also referred to as “Deloitte Global”) and each of its member firms and related entities are legally separate and independent entities, which cannot obligate or bind each other in respect of third parties.
